

COMPANY CASE STUDY

CITY OF GREATER GEELONG

OBJECTIVES

The City of Greater Geelong needed to improve how it engaged with its contractors and how it managed and identified whether they were compliant and also where they were on any of their sites at any given time whilst meeting the site specific compliance requirements.

There was also a need to replace an existing system that was problematic and not meeting requirements.

SOLUTION

A full Contractor Management solution was required to be implemented to meet all of the city's requirements for compliance, visibility and automated monitoring.

Implementing a company Pre-Qualification ensured all contracting companies engaged met the specific compliance requirements for the services they provide.

At an induction level, being able to induct all contractors, and also implement site specific inductions where required ensures any contractor attending a site is fully compliant and has all of the requirement information to perform work on that specific site.

At a site level, adding in a QR based sign-in system guarantees compliance of everyone on site, whilst giving instant visibility on all contractors and where they are working.

BENEFITS

Transparency

Easy for both the city and contracting companies to see and manage the compliance of both the contracting company and all individuals performing work for those companies.

Visibility

Real time visibility of all individuals on any of the city's sites.

Safety

Ensuring all contractors performing work on any of the city's sites are compliant.

AT A GLANCE

GOALS

- Better engagement
- Visibility of compliance
- Ease of use

BENEFITS

- Quick and easy sign in at all sites
- Easy maintenance of compliance for contracting companies
- Site specific inductions done before arriving on site
