Benchmarking

Identifying cost variation using the latest cloud technology

NHS trusts continue to face unprecedented financial challenges.

By quickly finding variation in cost of services, trusts can drive improvements in efficiency and productivity from data, helping deliver the best value healthcare.

Why choose Civica Benchmarking?

Our Benchmarking software empowers users to take control of their costing data and leverage it to provide an understanding of what's driving variation when compared to peers.

It's easy to customise your own outputs to transform your benchmarking data into meaningful reports and dashboards.

By comparing your data to your peers across an ICS you can share learning and best practice to deliver value to your population.

Benchmarking your cost collection data against peer(s) and national figures helps you understand where your Trust may be spending more on services than necessary.

The tool easily identifies cost variation in your data and allows you to upload your latest figures to monitor change in year without waiting for the next cost collection cycle.

It can mine data in minutes: returning insights in a fraction of the time it would take a human analyst using traditional BI methods.

Using your data, Benchmarking helps identify tangible opportunities for improvement and drives transformational change.

The benchmarking tool is system agnostic and can be used by any Trust irrespective of which system is used for the National Cost Collection. However, those Trusts using Civica CostMaster can. interrogate the identified variation at the episode level using tabular models. This allows you to intelligently identify services with the greatest variation.

Key takeaways

1 Easily identifies cost variation in your data

2 Monitors change in year so you don't have to wait for the next cost collection cycle

3 Mines data in minutes: for insights right at your fingertips
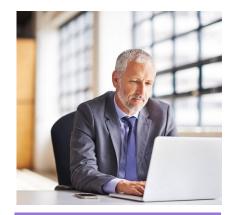

99%

of manual effort to interrogate data is removed

Features

- Takes benchmarking to new levels and enables you to drive the value identified in Model Hospital

- AI technology gives impressive processing speeds

- Integrates with Civica CostMaster for full analysis of identified variation

- No SQL knowledge required

- Uses PowerBI to provide instant analysis and drill capability

- Pre-defined reports provide instant outputs for stakeholders

- Transparent view of your information

- Intuitive, simple to use tool

- Change the view on a mouse click.

- Flexible processing resource supplying high performance at a lower cost

- Powerful reporting tools for dashboarding, comparison and scenario modelling

- Automates identification of cost variation in minutes

- Removes 99% of manual effort required to interrogate data

- Quickly highlights £millions of improvement opportunity

- Allows you to focus on driving transformational changes and achieve real outcomes

- Unlocks the true potential of your rich costing data set.

Benefits

- Enables you to benchmark your data within your organisation and across other organisations

- Improves clinical engagement with evidence based analysis at the patient level

- Fully managed platform, no additional overhead costs or licences

"Due to the number of patients we serve daily, having a clear view of our activity and cost variation is vital. We need to be able to source the information required to make robust investment decisions and achieve the most effective use of our resources."

Dawn Murphy,
