

Cashless Catering - Primary Cloud

Cloud meal pre-order and payment for primary schools. For fast efficient food service and improved pupil safety.

Speed-up the queue

Cashless Cloud for primary schools enables pupils and staff to purchase school meals without needing cash. It provides a safer and quicker break and lunch service with full transaction visibility for parents.

More sustainable

Online pre-ordering is fast and efficient for teachers, using a whiteboard browser or any web-enabled device. It helps the kitchen reduce food waste too.

Better visibility

Cloud means faster visibility of requirements for caterers that supply multiple schools. It also provides real time data on take-up, FSM and UiFSM for centralised teams.

Lower costs

Secure cloud hosting means faster implementation, improved data security and a lower total cost of ownership. There's no need for dedicated devices or local IT infrastructure. Support and updates are simpler too, with no local IT input required.

Simpler centralisation

A trust-wide cloud cashless system facilitates sharing best practice, the analysis of trends and a top-down approach to managing and your provision across schools in your Trust.

Safer pupils

We integrate with your MIS to mitigate the risks of students purchasing restricted dietary items, keeping pupils safe and your school compliant.

Convenient payments

Choose our digital payments option or integration with your existing provider so parents and guardians can make online payments and keep track of menu choices.

Easier integration

Cloud means easier and more resilient integration We integrate with more MIS, online payment and kitchen management solutions than any other cashless catering provider.

- 1 Reduce IT costs and improve security
- 2 Centralise processes and visibility
- 3 Make catering safer and more sustainable
