

CivicaCollect in-car mobile ANPR

Delivering actionable intelligence direct to enforcement agents for effective resourcing and improved collection rates.

Automatic vehicle detection using real-time data

This proven solution combines the power of CivicaCollect, our robust cloud collections software, with the latest mobile ANPR technology. It analyses data captured from mobile ANPR cameras against real-time debt data, sending instant alerts of collection opportunities to the enforcement agent in their vehicle and recording details of positive reads directly to the CivicaCollect database.

Continuous discreet ANPR scanning

This highly portable plug and play solution includes in-car cameras, a powerful ANPR engine and a tablet, all neatly packaged in a rugged carry case. It is easy to use and requires no installation, making it easy to move between vehicles. The equipment supplied is also discreet, minimising the likelihood of detection and wilful damage that is often experienced with external camera systems.

Flexible modular design

The system is powered by the latest Windows technology for assured data integrity and uses 3G or 4G connectivity to interface securely with the CivicaCollect database. Supporting up to four camera feeds, its modular design offers the flexibility to pick and choose the camera types most suitable for the operating environment, with in-car, multi-lane and infra-red options being available.

Main benefits:

- ▶ **Robust and portable** – can be installed into any vehicle
- ▶ **Fast and accurate** – with audible and visual alerts of registration plate matches
- ▶ **Plug and play** – requires a low level of technical expertise
- ▶ **More effective resourcing** – maximises vehicle detection opportunities
- ▶ Improved collection rates.

Core components

- ▶ Civica Intercept mobile software
- ▶ Getac tablet
- ▶ Axis HD camera
- ▶ Low profile Windows PC
- ▶ 4G data SIM enabled or Wi-Fi
- ▶ Protective Peli case packaged
- ▶ Install and support services.
