

eSAFETY

Engage employees and reduce workplace incidents

Employees are an organisations' greatest asset and best positioned to identify health and safety concerns.

eSAFETY simplifies reporting issues and processing critical data. Helping you to achieve a greater understanding of risks and evidence long term behavioural change of your workforce.

Positive health & safety culture

Our software supports organisations across multiple sites so everybody can make a contribution to their immediate workspace and the wider safety culture. Employees can complete actions and investigations, attach documents and images using laptops, tablets and iPads.

Streamlines processes

eSAFETY delivers powerful insights including managing risk mitigation and control measure implementation. Your data is centralised and can be evidenced enabling you to process investigations, assign and track remedial actions to employees.

Increases visibility

Live insights dashboards display real-time risk compliance for your entire organisation. eSAFETY sorts and filters data at a granular level enabling you to interrogate investigations.

Promotes best practice

Our software has everything you need to promote best practice health and safety management and legal compliance including:

- Risk assessments
- Managing identified risks
- Incident management reporting
- Action tracking
- Audits
- Reporting and training records.

Why choose eSAFETY?

- Intelligent analysis of health & safety data and bespoke reporting saves time and money
- Improves employee experience and establishes good health & safety practices
- Supports your organisation's health, safety and compliance needs

“eSAFETY is an integral part of our Health & Safety policy. An important element is promoting a positive health & safety culture.”

Safety & Health Risk Management Team,
Metropolitan Police

Key features

Incident reporting and investigations

Gathering and recording data that can be evidenced is made easy through questionnaires and Lookup Lists. Employees can report incidents online and link associated records including injuries, involved people, vehicles and releases. When an incident is reported, the relevant people are instantly emailed. This prompts an investigation into why the incident occurred and for the necessary actions to be taken.

Automates notifications and actions

Measure progress toward specific health and safety goals or simply monitor trends using KPIs dashboards and reports. Allocate actions to a group of people or an individual allowing you to monitor the required remedial actions. Keep employees up-to-date with automated email notifications when an activity is required.

Actions

No more paper trails because you can assign actions and monitor them through to completion.

Risk assessment

Introduce a consistent approach to risk assessment through structured recording of all identified potential hazards and who may be harmed. Quickly evaluate the data and determine appropriate methods to eliminate the hazard or control the risk.

Audits and inspections

Maintain compliance and best practices across multiple locations. You can monitor the progress of audits and inspections, by creating and scheduling them to the appropriate people. Audits can be linked to a specific aspect of an incident, risk assessment or physical location.

Training

Minimise non-compliance risk across your organisation and efficiently track training requirements. eSAFETY sends automated notifications to prompt refresher training keeping employees up-to-date in activities that pose a health and safety risk.

Advanced management reporting

eSAFETY is a secure and centralised knowledge base feeding live dashboards from your latest data. Gain actionable insights using standard or bespoke reporting and SAR/UK Data Protection Law compliance support.

HSE RIDDOR

Submit your RIDDOR reportable injuries to the HSE making it easy to comply with your legal requirements to report injuries.

UK Data Protection Law

eSAFETY has functionality to manage the retention of records, restrict processing, record legal, basis, privacy notices etc. A purge data functionality cleanses your data to remove unwanted records. Configure dates against records to let you schedule reviews and remain compliant.
