

Tranman

Integrated Driver Daily Checks

Ensuring vehicle road safety to minimise risks and reduce costs

Vehicle and driver compliance is paramount to assure driver safety and minimise downtime.

Using mobile technology, the Tranman integrated Driver Daily Checks app removes manual paper based processes to help drivers comply to safety regulations, efficiently and eliminate the risk of missing paperwork.

Identify missing nil-defects in real-time

The app supports fleet managers to ensure compliance by providing real-time data of all missing nil-defects and identified defects.

Submit your daily checks, at the vehicle

It provides a fast and easy way to improve driver safety. Using Android or iOS devices, drivers can instantly record their daily checks and report identified defects at their vehicle anytime, even without mobile coverage.

Rectify defects quickly to reduce downtime

Once a signal is available, all data recorded is synced automatically to your Tranman system, alerting your fleet department of identified defects, eliminating the need to re-key information and enabling defects to be rectified more quickly.

Key benefits

- ▶ Helps to ensure compliance with a real-time view of missing nil-defects and submitted defects
- ▶ Removes manual, paper based processes with mobile technology, both online and offline
- ▶ Guides your drivers to record defects consistently; facilitating faster rectification to minimise downtime
- ▶ Promotes proactive fleet management to help you improve driver safety and reduce risks
- ▶ Compatible with Android and IOS devices
