

TranSend Asset Tracking

Track, monitor and maintain

Insufficient management of critical tools and equipment can lead to heightened risk and cost associated with unavailable, unusable or misplaced assets.

Maintaining control of vital assets will help you to:

- Understand what you own
- Manage use and track movement
- Assess demand and plan availability
- Monitor maintenance and performance.

Better visibility and control

Initially designed for the fire services, this solution will ensure better visibility and control of your assets and manage allocation to vehicles (from rescue to response), so that they have the correct equipment on board and that each item of equipment is maintained and ready for use. Asset checks are performed on mobile devices (e.g. a Microsoft Surface Go (or similar) and will scan items against the vehicle asset inventory. Additionally, equipment tests that are completed by individuals are recorded virtually on the back office system for access and management.

Key features

- Digitally record and monitor varied asset types
- System aided asset maintenance scheduling
- Asset allocation to, depots, vehicles and trailers
- Completion of Inventory checks and asset tests via mobile or web
- Virtually accessible full asset inventory history for asset enquiries
- Inventory check issue resolution maintenance and system flagging of missing assets
- Defective asset management and repair
- Consumable asset management and auto requests for stock replenishment.
- Self-serve asset replacement requests. i.e. to allow nominated users within a depot to receive a spare vehicle in replacement for an existing vehicle that is off the road. Once allocated users are prompted to complete an inventory check to ensure that the replacement vehicle has the correct equipment attached
- Asset management and associated dashboards.
