

TranSend Route Planning

Deliver better customer service, reduce mileage and costs

Automate delivery and collection planning using the most cost effective route to maximise vehicle and driver resources.

Route planning is a complex process and requires planners to consider multiple criteria and circumstances. Examples include order and route data availability, specific customer requirements such as picking order and timings.

Simplify route planning with automation

TranSend, our cloud route planning software makes it easier and cheaper to plan your routes. By automating route planning, you'll standardise processes to improve service consistency, while saving your team time and effort.

Right resources for the right job

Get the most out of every journey. TranSend automatically matches the right resources based on vehicle capacity, equipment or driver skill sets to your customers' delivery needs. With access to real-time data, you can keep your customers updated with the latest ETAs.

Lower mileage with smart route planning

Choose the most efficient route that meets your business processes and customer needs.

TranSend integrates with your Enterprise Resource Planning (ERP) or order management system, automating planning based on order weights and volumes, location, delivery windows, vehicle capacity and driver availability and hour.

Plan ahead with better data insight

Run 'what-if' scenarios using live, historic or user-defined data to generate realistic results. Helping you plan for the future.

Complete fleet and delivery management

Take a look at our cloud [Fleet Management](#) and [electronic Proof Of Delivery \(ePOD\)](#) software, and see how you can get the most out of your fleet asset and boost operational efficiencies.

Why choose TranSend Route Planning?

- Save costs and time with faster delivery time and lower mileage
- Match vehicle attributes and driver skills to deliveries
- Make last-minute route changes or create ad-hoc collections
- Update customers with real-time delivery ETA
- Automatically update driver PDA to improve efficiency.

“ Using TranSend, we can select the best route that considered the type of skillset needed for the vehicle, equipment and engineers, saving a previously manual and time-consuming task.

Mark Coleby, Service Director at Hughes
