

Advanced tree management and consultancy

Trees add enormous value to your facility. But as living assets, they need to be constantly monitored and managed so that they stay healthy and you meet your legal obligations. ArborSafe brings you superior arboricultural consulting together with the most advanced tree management systems available worldwide.

With our expert assessments, reports, and systemised approach, facilities managers save significant sums and can direct funds to where they are needed most. And our ArborSafe software puts you in control with live information and clear guidance.

Tree assessment

We carry out one-off tree assessments or, as most clients prefer, annual assessments with scheduled reviews. Our arborists detail each tree's attributes, hazards and risks, giving guidance on actions needed and estimated costs.

ArborSafe software

ArborPlan gives your staff and contractors clear guidance, with live reports featuring all the information you need to manage your trees – including budget estimates, tree life expectancy and contractor quote guidance.

ArborPlan builds a history over time and makes it easy to search and review trees on site, so your works programmes can be accurately targeted.

ArborSafe tree management systems and services

- Tree inspections, reports and surveys
- One-off or scheduled hazard and risk assessments with documented actions, costs and status updates
- Tree inventory surveys and mapping.
- Assessment and reporting options
- Budget estimates by tree, risk and site
- Day-to-day tree data management
- Updating the history of work actions
- Tree and plant health advice
- Tree pest and disease guidance
- Ultrasonic tree scans and resistance drilling
- Construction impact assessments
- TPZ and SRZ mapping
- Tree valuation by tree or whole of the site
- Tree preservation and master planning
- Site canopy cover mapping
- Species selection advice and supply

Additional reports and specialty services

Detailed reports

Specialist tree reports can save you money via pre-development planning and development application reports for building projects. We can also provide detailed masterplan reports for long-term tree management or detailed guidance on managing significant trees.

Ultrasonic tree scans

Our ultrasonic scanning technology evaluates the internal structure of a tree. Without harming it, the scan looks for potential problems that can't be seen from the outside. Scans reveal the extent of internal cavities and degradation and are ideal for large trees showing signs of decay.

Pest and disease diagnosis and treatment

If you're worried about the health of your trees, we can help diagnose the causes. And we offer a range of well-proven, specialised plant health treatments for pests, diseases or soil issues, many of which are organic and can last several years after application.

Our clients include:

- Government bodies
- Universities
- Schools
- Caravan parks
- Cemeteries
- Retirement villages
- Corporate facilities
- Mining sites
