

## Civica Dox Analysis for Hospitals

Automation and integration of Preference Cards, Theatre Tally Forms, Analysis and Costing

### Civica DOX Analysis works in two parts:

#### Preference Cards and Theatre Tally Forms

Electronic preference cards featuring powerful and easy maintenance are complemented in theatre with electronic tally forms that are so efficient, nursing effort in theatre ranges from nil (very common) to less than a minute

#### Benefits of DOX Analysis with preference cards

- Reduced inventory holding costs
- Less material waste
- Rationalised selection of items reduces both item costs and holding costs
- Accurate and timely costing – items, labour, and equipment
- Longer shelf-life for operating items
- Standardised, high-quality preference card setup guidelines
- Improved turnover time and first case on-time starts

#### Benefits of DOX Analysis with Tally Forms

- Get the complete picture for in theatre usage through recording
- Set up typical for specific procedures

### Analysis and Costing

An Analysis Cube cuts and dices all of the data for an episode, relating every performance indicator (times, costs, billing, etc.), to each of the influencing variables (surgeon, anaesthesia, procedure type, insurer, etc.) to place a comprehensive analysis of the hospital as a business at your fingertips.

#### If you can't measure it, then you can't manage it.

Dox Analysis uses the data it collects, and more from your patient administration system, to provide unparalleled insight into the business and clinical processes of your hospital. That analysis and reporting includes your hospital's own direct and indirect costs.

### CIVICA Dox Analysis Solution for Day Hospitals
