

Parago

Asset & estate compliance software for schools

Parago school asset management software has been designed to help all schools easily record and keep track of their school's IT assets and inventory. Parago school asset management software relieves the burden often associated with managing assets while generating cost savings by finding lost items.

Developed in collaboration with education institutions, our school asset management software enables schools to effortlessly keep track of all their IT equipment, know who is using each device and feel confident that a comprehensive and accurate audit trail has been created.

Through Parago asset and estate management system, information such as - knowing which software products are being used frequently and which are not, will inform schools about how to maximise the value from their software investment.

The Dashboard & Reports module provides customisable, visual dashboards that can filter, manipulate, and export data easily.

Visit our website Civica.com/Parago school asset and estate management system or email us at Webenquiries@civica.com.au for more information.

"This is an excellent product chosen for its user friendliness and functionality. Its visual attributes make it easy to follow and create a novel way of maintaining the system."
