Recover

## Natural Disaster Management Solution

Simplifying natural disaster management

Recover is Australia's industry-leading disaster management system that supports local and state government recovery in accordance with the Disaster Recovery Funding Arrangements (DRFA). We empower organisations to rapidly and systematically collate, report and mange a natural disaster event.

Our robust solution allows organisations to comply with the reporting requirements of each state authority - damage estimates and photo evidence are easily produced for the funding submission process.

1 Web Portal

2 Mobile Recording

3 Cloud Data Storage

Web Portal

The Recover web portal allows organisations to manage event data and user access. This flexibility enables fast interaction with contractors and analysis of data. – Giving you the ability to understand proposed costs against actuals and severity of damages.

Mobile Recording

Documentation of evidence is streamlined using in-field mobile devices. Utilising GPS - damaged asset location coordinates and location information is effortlessly added to each record with geo-tagged photos, with date and time stamp.

Secure Data Storage

Recover removes the burden of storing data by providing a hosted central repository for all data, securing it in the cloud on local servers. Data is easily accessed by authorised users via the web portal or Android app on devices.

Claims Simplified

Recover simplifies the claims process. Data can be quickly output into relevant state compliant claim forms. Where the state has implemented a Recover based state user portal (NSW) – estimates and approvals are completed online.

1.14B

Total damages claimed in NSW and QLD since 2015
