

## Signum

### Signage Management Solution

#### Reducing risk to the community with temporary sign management

Signum is the government authorities and private traffic controllers answer to easily and accurately recording placement and monitoring of temporary signage. Our solution allows for onsite data collection and inventory management to help reduce risk for communities.

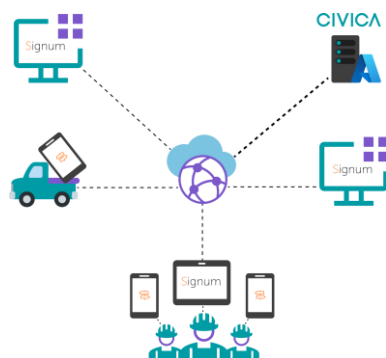

Our fully configurable tools enable organisations to quickly locate and allocate signs across the network. Using our web portal you, can access data anywhere and report key insights into asset allocation.

#### Risk Management

Signum supports organisations meeting risk requirements by identifying location and exact Date and time on when signs were placed, each instance a scheduled check was performed through to the exact Date and time when the signs were removed.

#### Secure Data Storage

Signum takes the burden of storing data locally by sending all data to our cloud-based servers. Temporary sign data can be accessed using our web portal to deliver accurate and real time reporting.

#### Mobile Recording

Recording accurate data is imperative to tracking and maintaining the use of temporary signage. Signum allows organisations to use android devices to collection data. GPS and chainage data are used in the field, to determine locations of deployed assets.

#### Data Access

Accessing data anywhere through Signum's web portal enables organisations to gather information accurately and efficiently. Our reporting tool empowers you to comprehensively understand how your sign inventory is being deployed.
