

RTLS In Motion for Senior Care

RTLS In Motion provides a safe and secure environment for your residents, and allows full tracking and operational visibility.

RTLS In Motion is a wireless nurse call system with real-time location tracking, providing GPS-like tracking throughout your senior care community.

Our system is a powerful resource that helps communities improve care delivery, resident and staff safety, and operational performance outperforming traditional hard-wired systems.

The wireless nurse call feature provides ergonomic resident, staff, and equipment pendants, that transmit their location, automatically track and log the location history of each resident, staff member and piece of equipment. When a resident needs help, they just press the button on their pendant and a staff member can attend their exact location. A button press sends an instant alert directly to the care team's mobile devices and nurse stations, including details of who requested help, where they are located, and the time of a call.

The mobile app allows staff to stay connected while away from the nurse station. From a mobile device, staff are able to receive nurse call alerts, search for residents and staff, find equipment and view up to date maintenance and cleanliness status.

Administration can use our reporting features to set operational goals, and share level of care reports with resident families during conferences.

RTLS In Motion can also prevent and control resident wandering and elopement. Real-time location tracking provides smart alerts, allowing staff to intervene before accidents can happen. Smart sensors on exit doors and elevators prevent residents from leaving the safety of staff monitored areas. Resident wandering alerting helps keep wander prone residents safer by notifying staff when residents are approaching stairs, exits or off limit areas.

“ After doing a thorough review of available systems, it was clear that Civica’s RTLS provided unmatched functionality over and above typical nurse call functions.”

Debi Bourque,
Executive Director, Wauklehegan

Why Civica

- RTLS serves over 8,300 residents, assists 5,800 staff, emits 62,000 weekly alerts, and saves over 1,000 hours.
- Our smart software is helping deliver the public services of the future
- With over 30 years experience, we're committed to improving outcomes for citizens
- Every day, we focus on turning ideas into action to help over 2.5 million professionals deliver the public services of the future.
- Civica delivers cloud-enabled critical software to drive clinical, financial and workforce efficiencies. Supporting frontline workers, clinicians and key decision-makers with precise insight to make informed decisions, our focus is always on getting the right information to the right person at the right time.

Advanced wireless nurse call system

RTLS In Motion uses wearable nurse call pendants and staff duress tags that are always within reach. Our system instantly provides the exact location of residents and staff, as well as the time and location of any call. By giving residents a wireless pendant, RTLS In Motion greatly increases the nurse call coverage within any community.

Resident elopement & wander alert

Each community can set-up customizable rules to alert staff before residents have the opportunity to enter a potentially harmful situation. Examples include entering a wrong room, lingering at exit doors, entering stairwells, becoming mobile without a walker, long periods without resident movement or activity, or leaving a bed in the middle of the night.

Optimized for mobile devices

RTLS In Motion supports an extensive list of mobile devices (smart-phones, tablets, VOIP phones, pagers, etc), allowing staff to be connected while on the go. From anywhere on campus, staff can use the mobile app to search for people, and equipment, while never missing an alert.

Accurate location tracking

Instantly locate any resident, staff, or item by viewing the easy to read RTLS Map. Our system automatically records the location history of staff, residents, and equipment. The extremely accurate locating feature helps staff quickly find people and items, and allows administration to gain accurate operational performance metrics.

Equipment tracking

Using wireless equipment tracking tags, communities can track equipment location, usage, maintenance, and cleanliness. From the convenience of a mobile device or nurse station, staff can quickly find equipment, and view its maintenance and cleanliness status. Additionally, management can track equipment usage through our reporting system to determine if inventory level adjustments are required.

Management tools & reporting

RTLS In Motion automatically collects location, movement, work-flow, and event data, of residents, staff and equipment. Administrators can now see exactly what happens in their facilities, and make informed decisions based of accurate metrics and events.
